## In the Specification

Although not indicated by the Examiner, Applicant located a clerical error in the specification which requires amendment. On page 8, the paragraph beginning on line 16, please amend as follows:

The attachment device 10 may further be defined as having quick connect fittings 45a, 45b on the air lines 40a, 40b beyond the check valve 42a, 42b and the regulator 44a, 44b allowing for a quick connection of the air line 40a, 40b to the inlet chucks 52a, 54b. Similarly, the foam tubing 70a, 70b may also be connected to the outlet chucks 56r, 56l 56a, 56b using quick connect fittings 75a, 75b, to provide a quick disconnection and connection of the foam headers 50a, 50b from the air lines 40a, 40b and foam tubing 70a, 70b for cleaning the system after use to remove the foaming solution 80 residue in the foam headers 50a, 50b, bottles 60 and foam tubing 70a, 70b. See FIG. 3. These quick connect fittings 45a, 45b, 75a, 75b may also allow for the air line 40a, 40b to be connected directly to the foam tubing 75a, 75b using a quick connect fitting adapter (not shown) to purge the foam tubing 70a, 70b of residual foam 84 in the foam tubing 70a, 70b with air. The foam tubing 70a, 70b should be flexible, which would allow them to remain attached to the boom sprayer apparatus 150 when the boom arms 152, 154 are folded into a stored position after use. Swimming pool hose has been found to be most suitable as the foam tubing 70a, 70b or otherwise best presented as one inch clear plastic tubing to monitor the flow and quantity of foam being disposed to the vertical drop tubes 74a, 74b.
